

Hop Bush

Dodonaea viscosa

Height: 15 feet

Spread: 15 feet

Sunlight: ○ ●

Hardiness Zone: 8b

Other Names: Hopbush, Hopseed Bush, Hopwood, Candlewood

Description:

A rapidly growing shrub that is great as a hedge or informal screen; flowers are insignificant, but are followed by pale yellow fruit that eventually turns brown; tolerant of dry summer conditions once established

Ornamental Features

Hop Bush has rich green evergreen foliage on a plant with an upright spreading habit of growth. The narrow leaves remain green throughout the winter. It produces small clusters of brown hop-like fruit from late summer to early fall.

Landscape Attributes

Hop Bush is a multi-stemmed evergreen shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and can be pruned at anytime. It has no significant negative characteristics.

Hop Bush is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Container Planting

Planting & Growing

Hop Bush will grow to be about 15 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is native to parts of North America.

Hop Bush makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Its large size and upright habit of growth lend it for use as a solitary accent, or in a composition surrounded by smaller plants around the base and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
